

## Glasgow Radar Unavailable from August 14th to August 18th...

Starting at 8:00 a.m. MDT, Monday, August 14 the Glasgow Radar (KGGW) will be out of service in order to upgrade the system. The installation of the upgrade will take until Friday, August 18.

During the week there will be no radar data available from Glasgow. For nearby radar data users can view the Billings, Bismarck, Great Falls, and Minot radars.

For internet users the best radar to use is the Billings radar, which can be accessed by clicking on the down arrow button on Glasgow's radar web page or by going directly to <http://radar.weather.gov/radar.php?rid=blx>. Once at the Billings radar web page click on the Long Range base image or composite image. The other radars have some coverage of northeast Montana on the web page and may better show the radar data in your area. Also online is an FAA radar from Watford City, ND, available online at <http://www.crh.noaa.gov/ridge/Arsr-4/>.

The National Weather Service in Glasgow will still be issuing forecasts and warnings during the upgrade. The Glasgow office will utilize the adjacent radars along with radars from other agencies and governments.

If you have any questions please call the office at (406) 228-4042.
